Release Notes

Public Releases

Version 1.1.09	
Features	• Added toggle state tracking, which monitors the power state of the device that has been powered. For example, if the AT-ANC-108D is used to power-on the AT-UHD-SW-510W, and the AT-UHD-SW-510W is powered off at the unit, the AT-ANC-108D will recognize the new power state, allowing the toggle button to, once again, power-on the AT-UHD-SW-510W. » MacroToggle. MacroToggle sta X X=1-16 Macro ID. MacroToggle X Y X=1-16 Macro ID., Y=0-1(0: macro 1-8, 1: macro 9-16) • Added the ability to manage the hostname using the SHostName and RHostName commands. • Added the device hostname as part of a query, when executing the “System sta” command.
Bug Fixes	• Improved accuracy in timing for repeated commands. • Resolved rendering issues within the webUI in Google Chrome version 73.0.3683.103. • Improved accuracy in timing for polling intervals. • Resolved an issue where if a button was set to toggle mode, pressing the button would execute both the ON and OFF macros from a single button press. • Implemented a function that will ignore button pressing, while an ON or OFF macro is running on a single button. This would result in executing both the ON and OFF macros at the same time. • Resolved an issue where performing a factory reset would cause the unit to assign a static IP address.

Previous Releases

Version 1.1.01	
Features	• Improved functionality of the “Broadcast off” feature, which optimizes syncing with AMS.
Bug Fixes	• Fixed lock-up issue. • Decreased the reboot time from every 24 hours to every 8 hours.

Version 1
• Factory Firmware
