

# **Device Manager**

Velocity Device Manager AT-VDM-SW Installation

# Version Information

Version	Release Date	Notes
1	May 2018	Initial release
2	March 2020	Updated for integration within Velocity
3	Feb 2021	Updated for Firmware 2.3.0 release
4	Nov 2022	Updated for Firmware 2.5.2 release
5	Oct 2023	Updated requirements for Firmware 2.6.1 release

#### Welcome to Atlona!

Thank you for purchasing this Atlona product. We hope you enjoy it and will take a extra few moments to register your new purchase.

Registration only takes a few minutes and protects this product against theft or loss. In addition, you will receive notifications of product updates and firmware. Atlona product registration is voluntary and failure to register will not affect the product warranty.

International Headquarters

Atlona International AG

#### Introduction

Velocity Device Manager is a powerful resource that allows system integrators and AV / IT technology managers to configure and manage Atlona devices over a network. It supports automatic discovery, setup, and commissioning of Atlona IP-controlled products as well as provides continual system monitoring and the ability to manage bulk firmware and credential updates. Velocity Device Manager is available as a free virtual machine software download, AT-VDM-SW, and is also included in the complete Velocity control system components: AT-VGW-HW hardware gateway, AT-VGW-SW software gateway, and AT-VTPG-1000VL all-in-one 10" touch panel with gateway.

#### Requirements

- AT-VDM-SW MAC software download
- Operating System MAC: Ventura
- RAM 4GB minimum
- 32GB HD space minimum
- CPU Apple silicon with M-series chips (e.g. M1, M1Pro, M2, etc) or Apple Intel
- Gigabit Ethernet Card
- Wired Ethernet connection for support of MdNS discovery

#### OS, CPU, and RAM Verification

To verify that the computer matches the requirements and to find out which download is needed, follow the next steps:

- Select the apple icon in the top left corner of the device. A drop down menu will appear.
- Select About This Mac from the menu. A new pop up will appear.
- Look at the first line for the Processor (for Intel) or Chip (silicon) to verify which CPU it is using, the Memory
  will be listed directly under that, and the operating system will be displayed as the last line. Ensure when
  downloading that the file name matches the CPU type.

#### Installation

Once AT-VDM-SW has been downloaded, the application UTM and the Velocity 2.6.1+ software must be installed. These instructions will go over Intel and Silicon MAC device installation.

1. Once the installer is downloaded, open the zip file. A window will open with Velocity 2.X.X.utm and the UTM application.

2. Double click UTM.dmg to install. A new window will open.

- 3. Drag and drop the UTM into the Applications folder icon.
- 4. If the computer previously had an install, select **Replace** from the pop up. If this is a new install, it will go straight into the Copying pop up. Once copying is done, it will verify the software and then finish installing.

UTM		An item named "UTM" already exists in this location. Do you want to replace it with the one you're moving? Keep Both Stop Replace
	Applications	Copying "UTM" to "Applications" 905.2 MB of 1.14 GB - About 5 seconds
		Verifying "UTM"

- 5. Return to the Velocity 2.X.X window and copy the Velocity 2.X.X.utm file.
- 6. Paste the copied file into a new folder, that can be created anywhere that is useful for installation. In this guide, it will be pasted into a new folder created in downloads.

#### Installation

- Select the options button on the top right corner. A drop down menu will open. a.
- b. Select Copy from the menu.

Q

- 7. Select Launchpad from the app bar at the bottom of the screen. The applications screen will open.
- 8. Select **UTM** from the applications. A pop up will appear.

- 9. Select the **Open** button. The UTM application will open.
- 10. Return to the new folder and select **Velocity 2.X.X.utm**. The file will appear in the open UTM instance. The name of the file will appear different for Silicon and Intel, but the steps will remain the same.

- 11. Right click Velocity 2.X.X within UTM. A menu will appear.
- 12. Select **Clone**. A pop up will appear.
- 13. Select the **Yes** button. The cloning process can take up to 60 seconds to complete. Once complete, a second Velocity 2.X.X will appear under the first one.

- 14. Select first Velocity 2.X.X, then select the delete icon.
- 15. Select **Remove** from the pop up window. The first Velocity will disappear from the list.

- 16. Click on the remaining Velocity 2.X.X. The machine status will display on the right.
- 17. Select the play button to start Velocity Device Manager. A pop up will appear and go through the launch process.

18. When the Ubuntu GNU GRUB screen appears, press the enter button to finish launching. This process can take up to five minutes and is complete when the screen stops on the Initial Velocity Control Gateway Setup screen and an IP is displayed.

#### Login & Network

i

i

While Velocity Device Manager can be set up and ran through the UTM appliance, it is best to open a tab within a local network browser and run it there.

- 1. Enter the IP from the Initial Velocity Control Gateway Setup Screen into a browser.
- 2. Once the IP is entered, Velocity will auto login. Fill in the initial set up information, including: Company Name, First & Last name, the email address for system emails to be sent, time zone, and a new password.
- 3. Select the end-user license agreement link and download the EULA file.

**NOTE:** Once the initial log in and activation is complete, the new password should be kept somewhere easy to find. If the password is lost, please follow the directions in the Reset Password section of the Velocity manual.

				Passwords Match!

**NOTE:** Passwords must be at least 8 characters and include: 1 number, 1 uppercase letter, 1 lowercase letter, and 1 special character. The text will appear all green when the password meets all criteria.

- 4. Select the checkbox next to the I agree to the end-user license agreement to bring the SUBMIT button up.
- Press SUBMIT to update the password and login information. The pop up will close and the home page will display.
- 6. Select  $\equiv$  from the top left corner of the screen. A new menu will open.
- 7. Select Settings to expand new options. Select NETWORK.

#### Setup & Login

- 8. The current IP will display under Network 1. It is best to set the device to static IP in case of power loss or server resets.
- ļ

i

**NOTE:** For MdNS discovery, the PC AMS is installed on should have a wired Ethernet connection as most wireless networks will not support MdNS.

**NOTE:** The Velocity Device Manager manual can be found at: <u>https://atlona.com/product/at-vdm-sw/</u>.
