Release Notes

Public Release

Version 1.0.16	
Features	• Added support for Windows 10 firmware update over USB. • Improved system communication with AMS and other Atlona hardware.
Bug Fixes	• Fixed an issue where the EDID was not returned to "STD" when factory defaults were applied. • Sending the PWON command no longer causes the video to flicker. • Fixed an issue where the Power LED indicator would not accurately reflect the power state of AT-UHD-CAT-2. • Fixed an issue where the unit would need to be reset after applying network settings. • Corrected wrong data within the 3840x2160@60 2CH EDID. • Corrected wrong data within the 3840x2160@60 Multi CH EDID.
Known Issues	• This firmware must be uploaded using the AT-UHD-CAT-2 web GUI under Windows 10. If using Windows 7, the USB method can be used.
