Release Notes

Public Release

Version 2.0.00	
Features	• Added mDNS functionality. • Unit now processes volume commands faster.
Bug Fixes	• The unit will now recover if the firmware update process fails. • Resolved an issue where the webGUI would not save settings while the unit is performing other operations. • Resolved an issue where some laptops had trouble negotiating audio configuration, causing slow performance of the unit. • Changing the output resolution and preferred input timing will not cause the unit to lock up. • Resolved and issue where the TrigRS command did not execute 100% of the time. • Addressed an issue where the unit would not respond or report due to overheating. • Resolved issue where the mic would unmute after a system reboot. • The unit now properly renews the DHCP lease time. • Resolved an issue where the RS232zone command would send invalid data. • Sending the PWON command, multiple times, no longer causes the unit to lock up.
Known Issues	• If a Dell XPS 15 is used as a 1080p source, and the AT-UHD-CLSO-601 EDID is set to 4K with a resolution output of 1080p, the Dell XPS 15 will indicate that 1080p is the output resolution even though it is outputting 4K. This will cause a distorted images and is caused by the down-scaling of a 4K image to 1080p.

Previous Releases

Version 1.2.0	

Features	• Added zone feedback for monitoring through the AT-UHD-CLSO-601.
	• Partial CEC control implemented.
	• Display control through RS-232, IP, front panel buttons, and webGUI added
	• RS-232 commands added:
	    • SetCmd x[y] - Sets the RS-232 or IP command for the selected button or function
	      x = on, off, vol+, vol-, and mute y = command
	    • SetEnd x[y] - Sets the line termination for the chosen command
	      x = on, off, vol+, vol-, mute, fbkon, fbkoff, fbkmute
	      y = None, CR, LF, CR-LF, Space, STX, ETX, and null
	    • TrigCEC y - Triggers the stored CEC command to turn the display on and off
	      y = on, off
	    • TrigRS y - Triggers the RS-232 command from RS-232 or IP
	      y = on, off, vol+, vol-, and mute
	    • TrigIP y - Triggers the IP command from RS-232 or IP
	      y = on, off, vol+, vol-, and mute
	    • CtlType x - Sets the control type
	      x = ip, rs-232, cec
	    • CliMode x - Sets the control device's IP mode
	      x = sta, login, non-login
	    • CliUser x - Sets the IP username for login
	      x = username, (blank)
	    • CliPass x - Sets the IP password for login
	      x = password, (blank)
	    • CliIPAddr x - Sets the IP address of the controlled device
	      x = ip, sta
	    • CliPort x - Sets the IP port of the controlled device
	      x = port, sta
	    • More commands located on page 20 of the user manual

Bug Fixes	• Fixed RS-232 and IP feedback for font panel volume and OSD volume & EQ. • Fixed input scaling, so picture no longer becomes distorted when using follow input setting. • Aud InX AiY no longer loses audio on power cycle. • No longer loses Telnet connection on power loss. • IP no longer locks up when certain conditions happen.
Known Issues	• CEC works for Samsung and Sony displays but other displays may work partially (turn on but not off) or not at all.

Version 1
• Factory Firmware
