

# Release Notes ~ AT-UHD-CLSO-824

## Public Release:

### Version 1.0.28

- Added the ability to switch between DHCP and static IP through the front panel
- Added CLI debug command
- Improved compatibility with AT-HDVS-200-TX
- VGA audio no longer incorrectly mixes with input audio when Auto Follow Other Video (AFOV) is selected
- Fixed consistency with HDBaseT projector video
- Updating DSP firmware no longer causes audio to drop
- Fixed IP control to improve speed
- Unit no longer locks up when network security software scans the unit
- HDVS-200-RX no longer loses audio when rebooted while connected to the UHD-CLSO-824
- Fixed webGUI home page showing incorrectly at different resolutions
- Video flashing no longer occurs with HDBaseT projectors

### Known Issues

- None at this time

## Previous Release:

### Version 1.0.23

- Unit now receives feedback over TCP/IP and RS-232
- IP command response speed increased
- VGA audio now plays correctly when configured to AFOV

### Version 1.0.15

- HDVS-200 now compatible with HDVS page of CLSO-824 webGUI
- Zone commands now pass through to the HDVS-200-RX via IP or RS-232
- New command "HDVS sta" added to display IP of connected HDVS units
- HDVS-200-TX and HDVS-150-TX display control through IP now compatible with the CLSO-824
- Adjusting audio while muted no longer unmutes or creates audio stuttering
- HDVS page within the webGUI now correctly displays switch information
- VMicX Y now returning correct feedback values over RS-232 and IP
- Users can now connect by IP when Login mode is enabled
- Stored EDIDs are now selectable in the memory slots of the webGUI
- CLSO-824 no longer locks up when the webGUI is refreshed rapidly
- Incorrect RS-232 zone command no longer lock up the CLSO-824
- CLSO-824 no longer resets the HDVS-150-TX back to default settings when connected

### Version 1

- Factory Firmware
