Omega USB Compatibility List

With the large amount of USB devices, Atlona has started testing specific devices to ensure compatibility with Omega series of extenders, scalars, and switchers. This document will provide a list of specifically tested devices and will be updated as more products are confirmed compatible.

If a USB device is not found on this list, it does not mean the device is not compatible, but that it has not been specifically tested in-house or through our partners. Atlona encourages users to connect devices and share their feedback. Atlona will continue to expand the list of tested and supported devices.

Adapters

Manufacturer	Model	Notes:
Apple	A1621
